MOOTHEDAN POOLS

Moothedan Pools started its operations in 2003 as a swimming pool construction company bringing innovative pool ideas to the South Indian pool market.

In the year 2008 the global strategic partnership with the 'JDpools -Thailand' took us further forward to consolidate our market presence in India and beyond.

During the Covid pandemic years, Moothedan Pools started investing heavily on setting up its factory facilities, aspiring to become a global leader, attributing to the ever growing tourism and wellness industry. Our committed and dedicated research and development team, worked hard to achieve the above aspirations possible, by designing and developing various models of Modern Filter Systems, Fiberglass Hybrid Structure Panels, Jacuzzi systems etc. focusing on elegance, cost effectiveness, longevity and speedy project completion. These innovative products developed on the Mantra of "simplified pool engineering" became a runaway success, winning hearts of thousands of pool owners of India.

Our special focus on competition pools, combining tradition and innovation made so many Olympic and Semi Olympic pools across India, in a short span of time.

Our happy clientele includes Taj, Hyatt Regency, Manappuram Aquatic Centre, CIAL Golf and Country Club etc, along with so many schools and colleges across India, not to mention the pools built for hundreds of resort and residential clients.

Jose Moothedan
Chairman and CEO

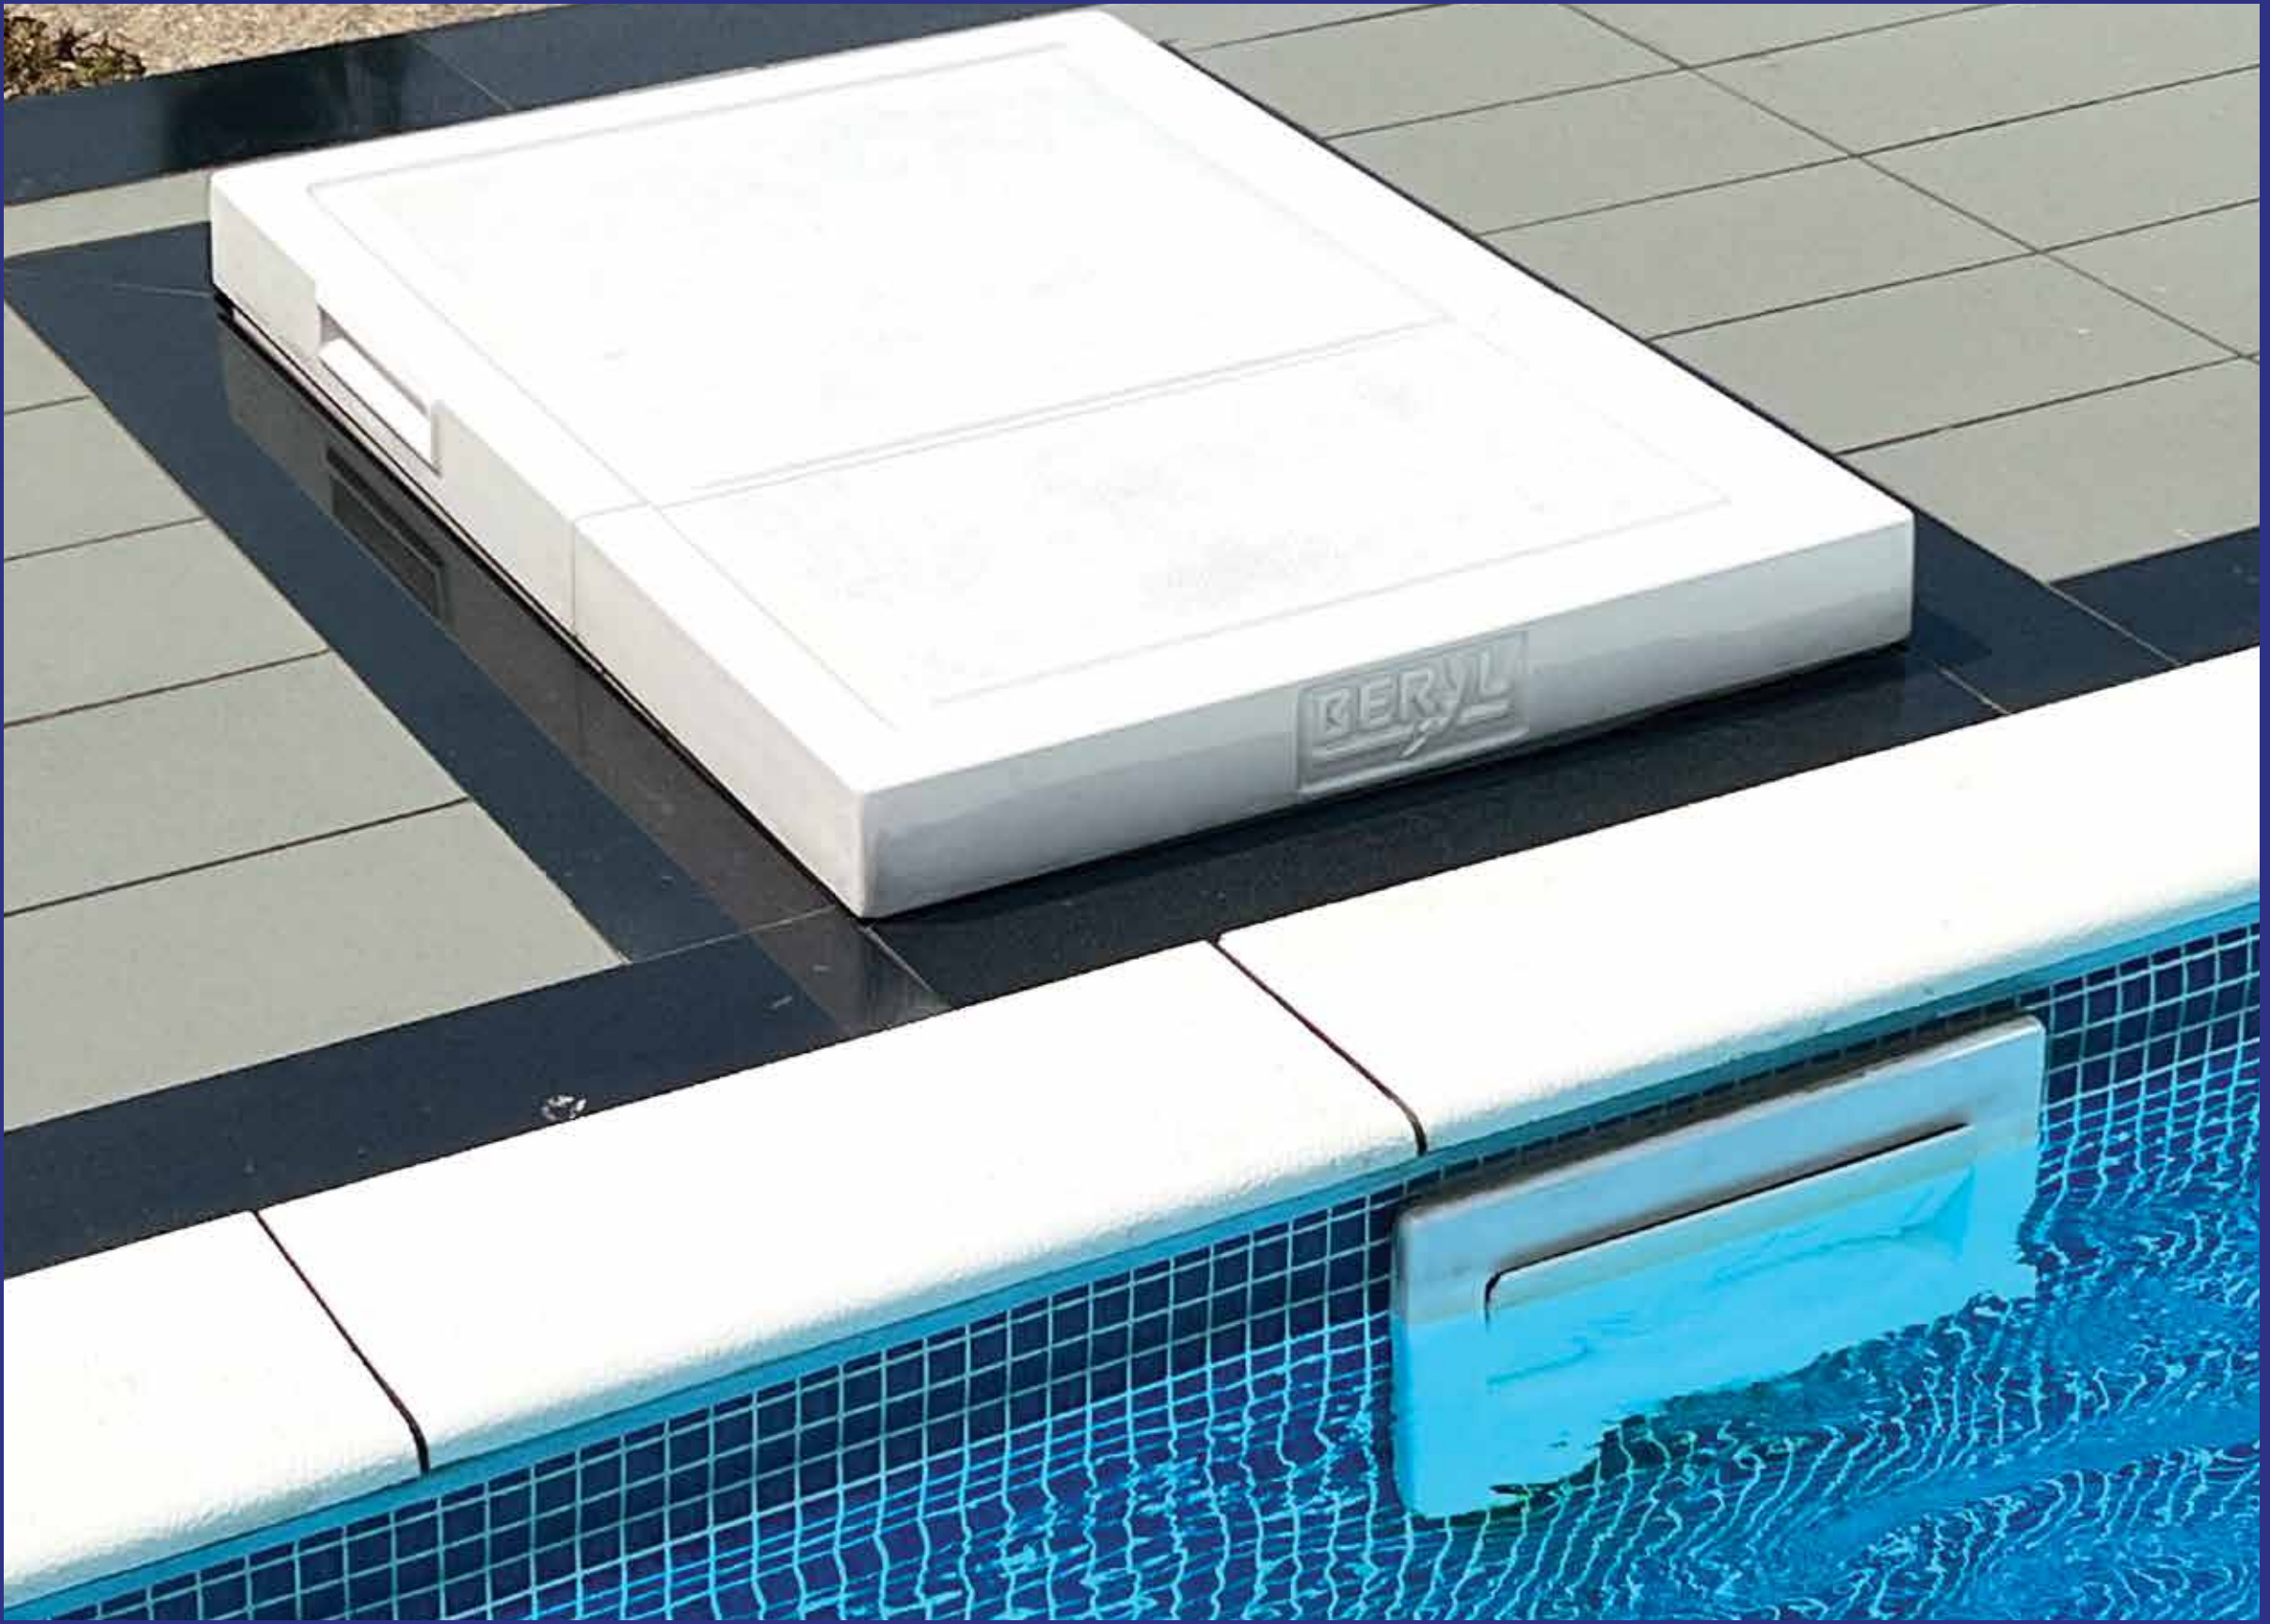

WH - 191 SERIES

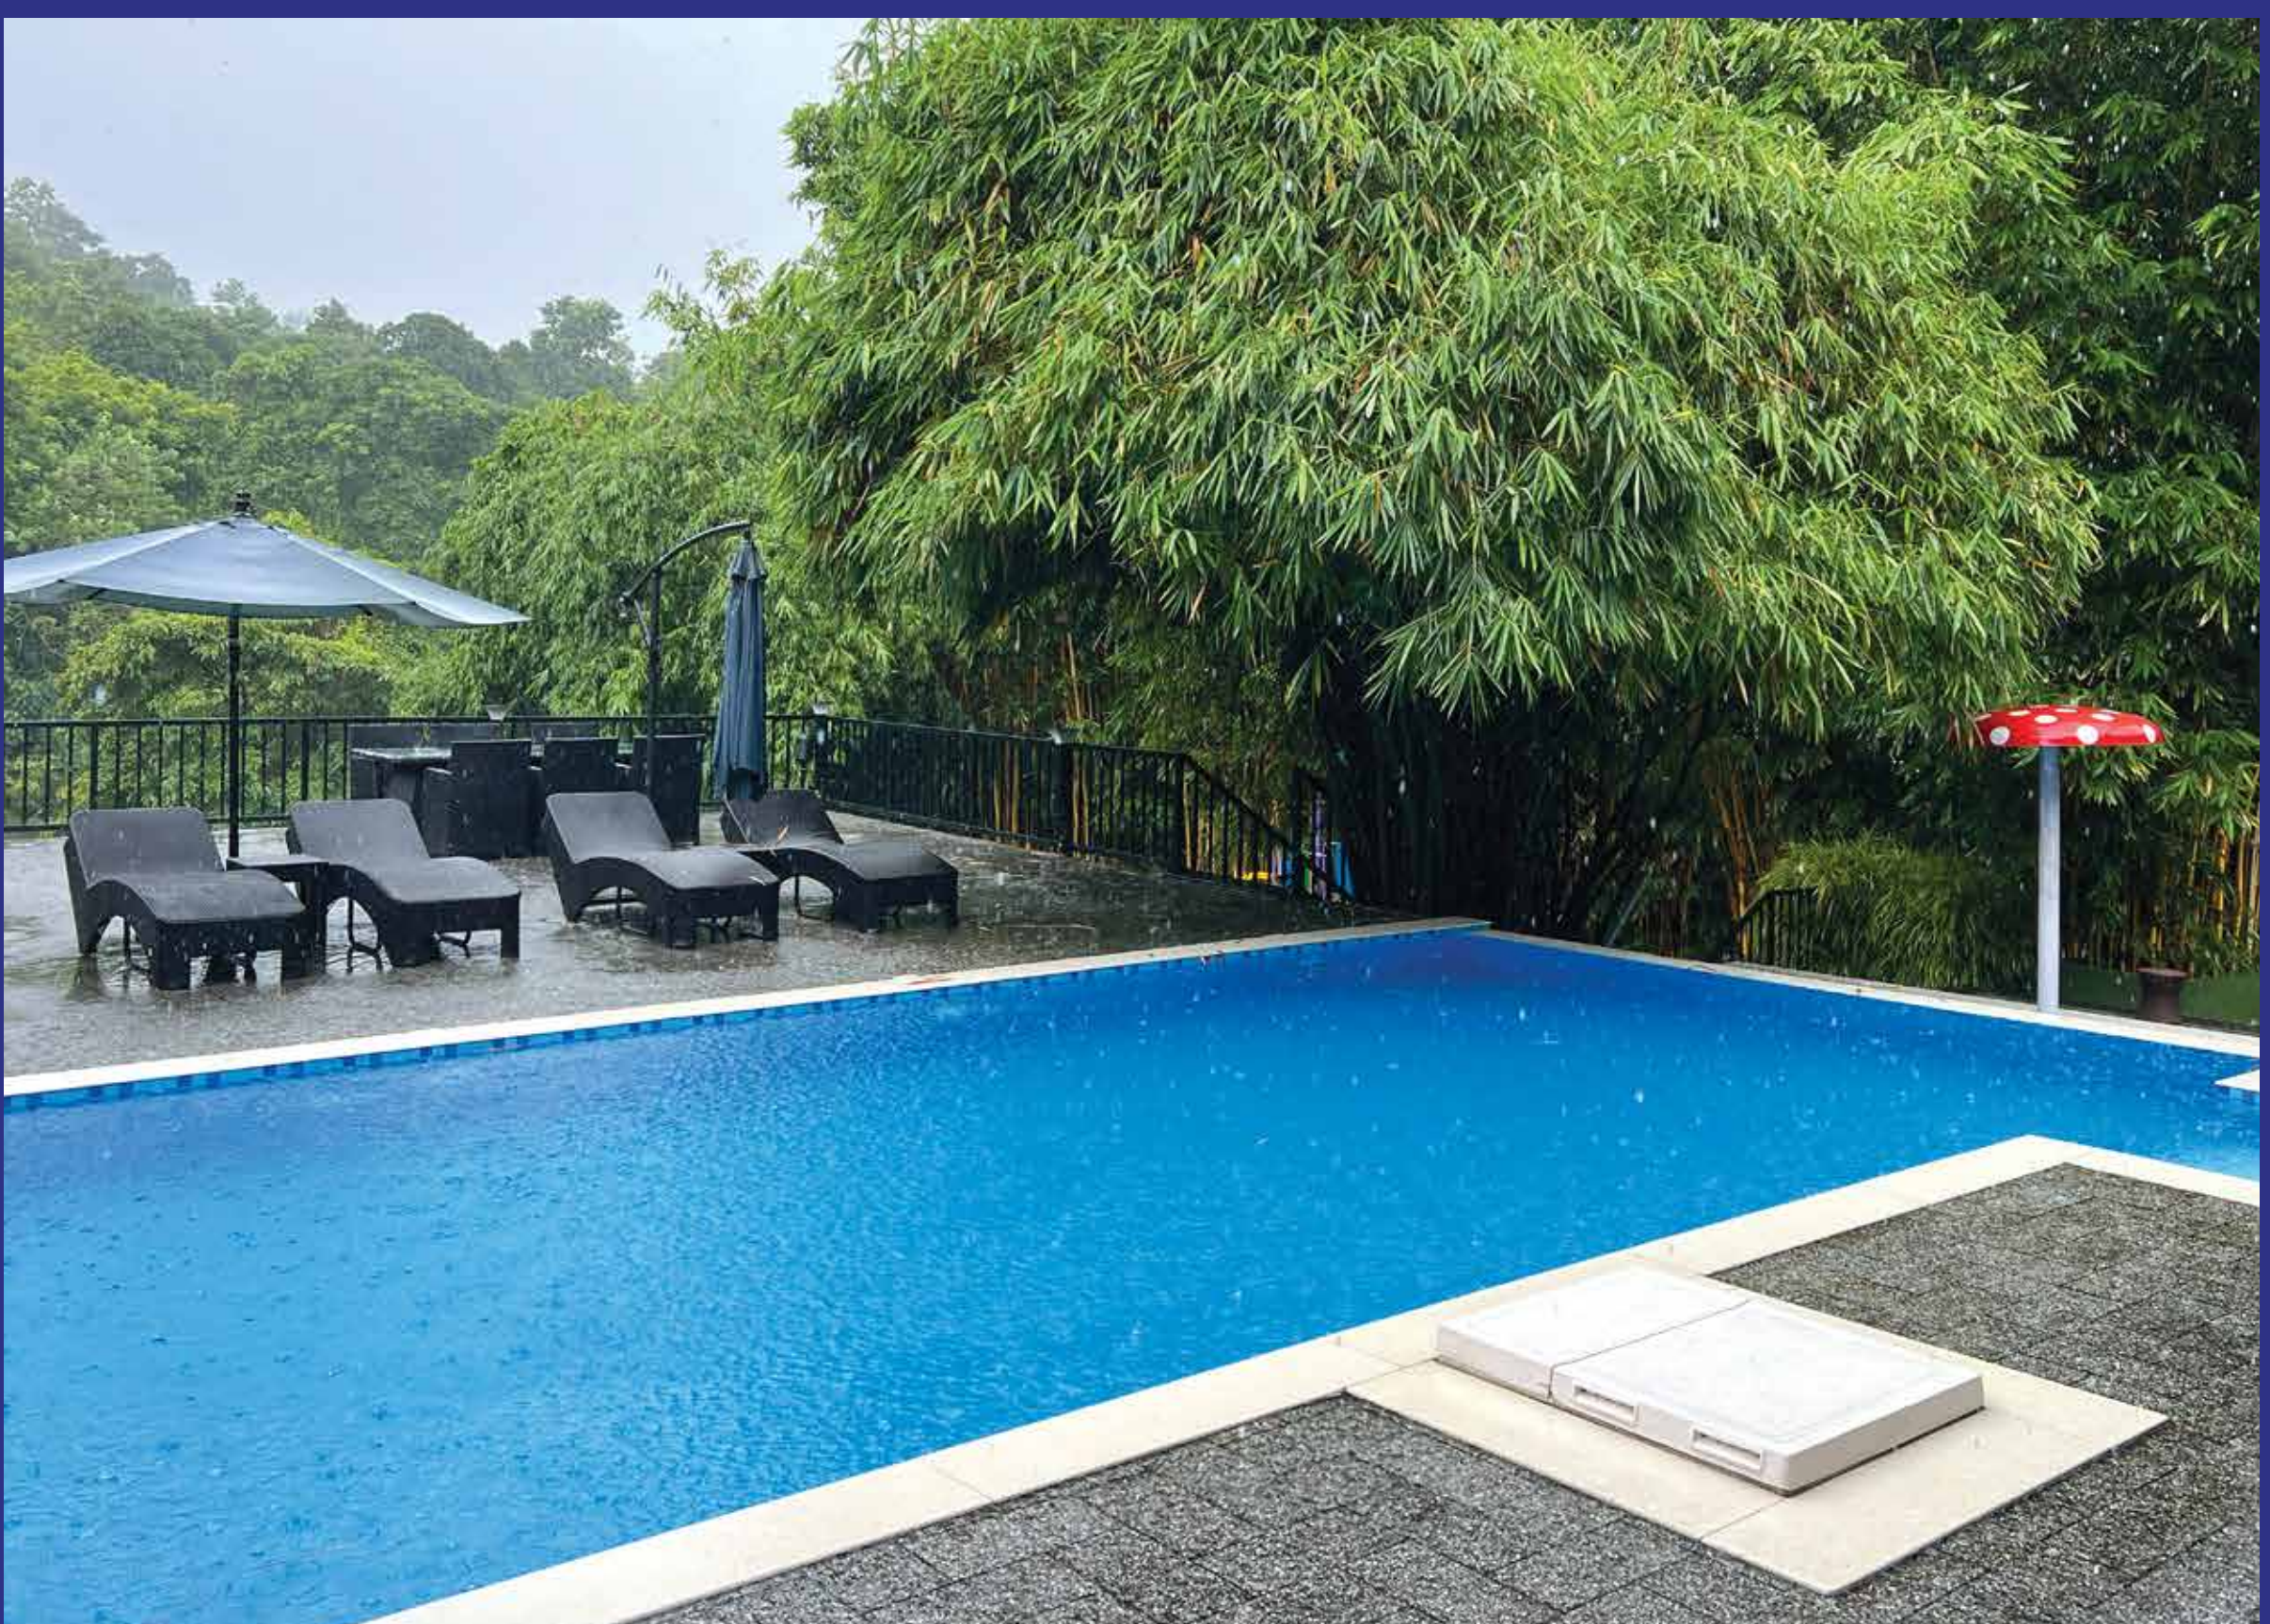

WH series filters are the wall hanging filters, ready to install in an already completed pool structure. With its futuristic design and engineering excellence, this filter stands out in a market flooded with countless Chinese and Indian products which are otherwise known as “pipeless filters”. Fitted with 5/15 microns German membrane and LED light, WH filters are also Ideal option for pool renovation works, in acute MEP failure situations.

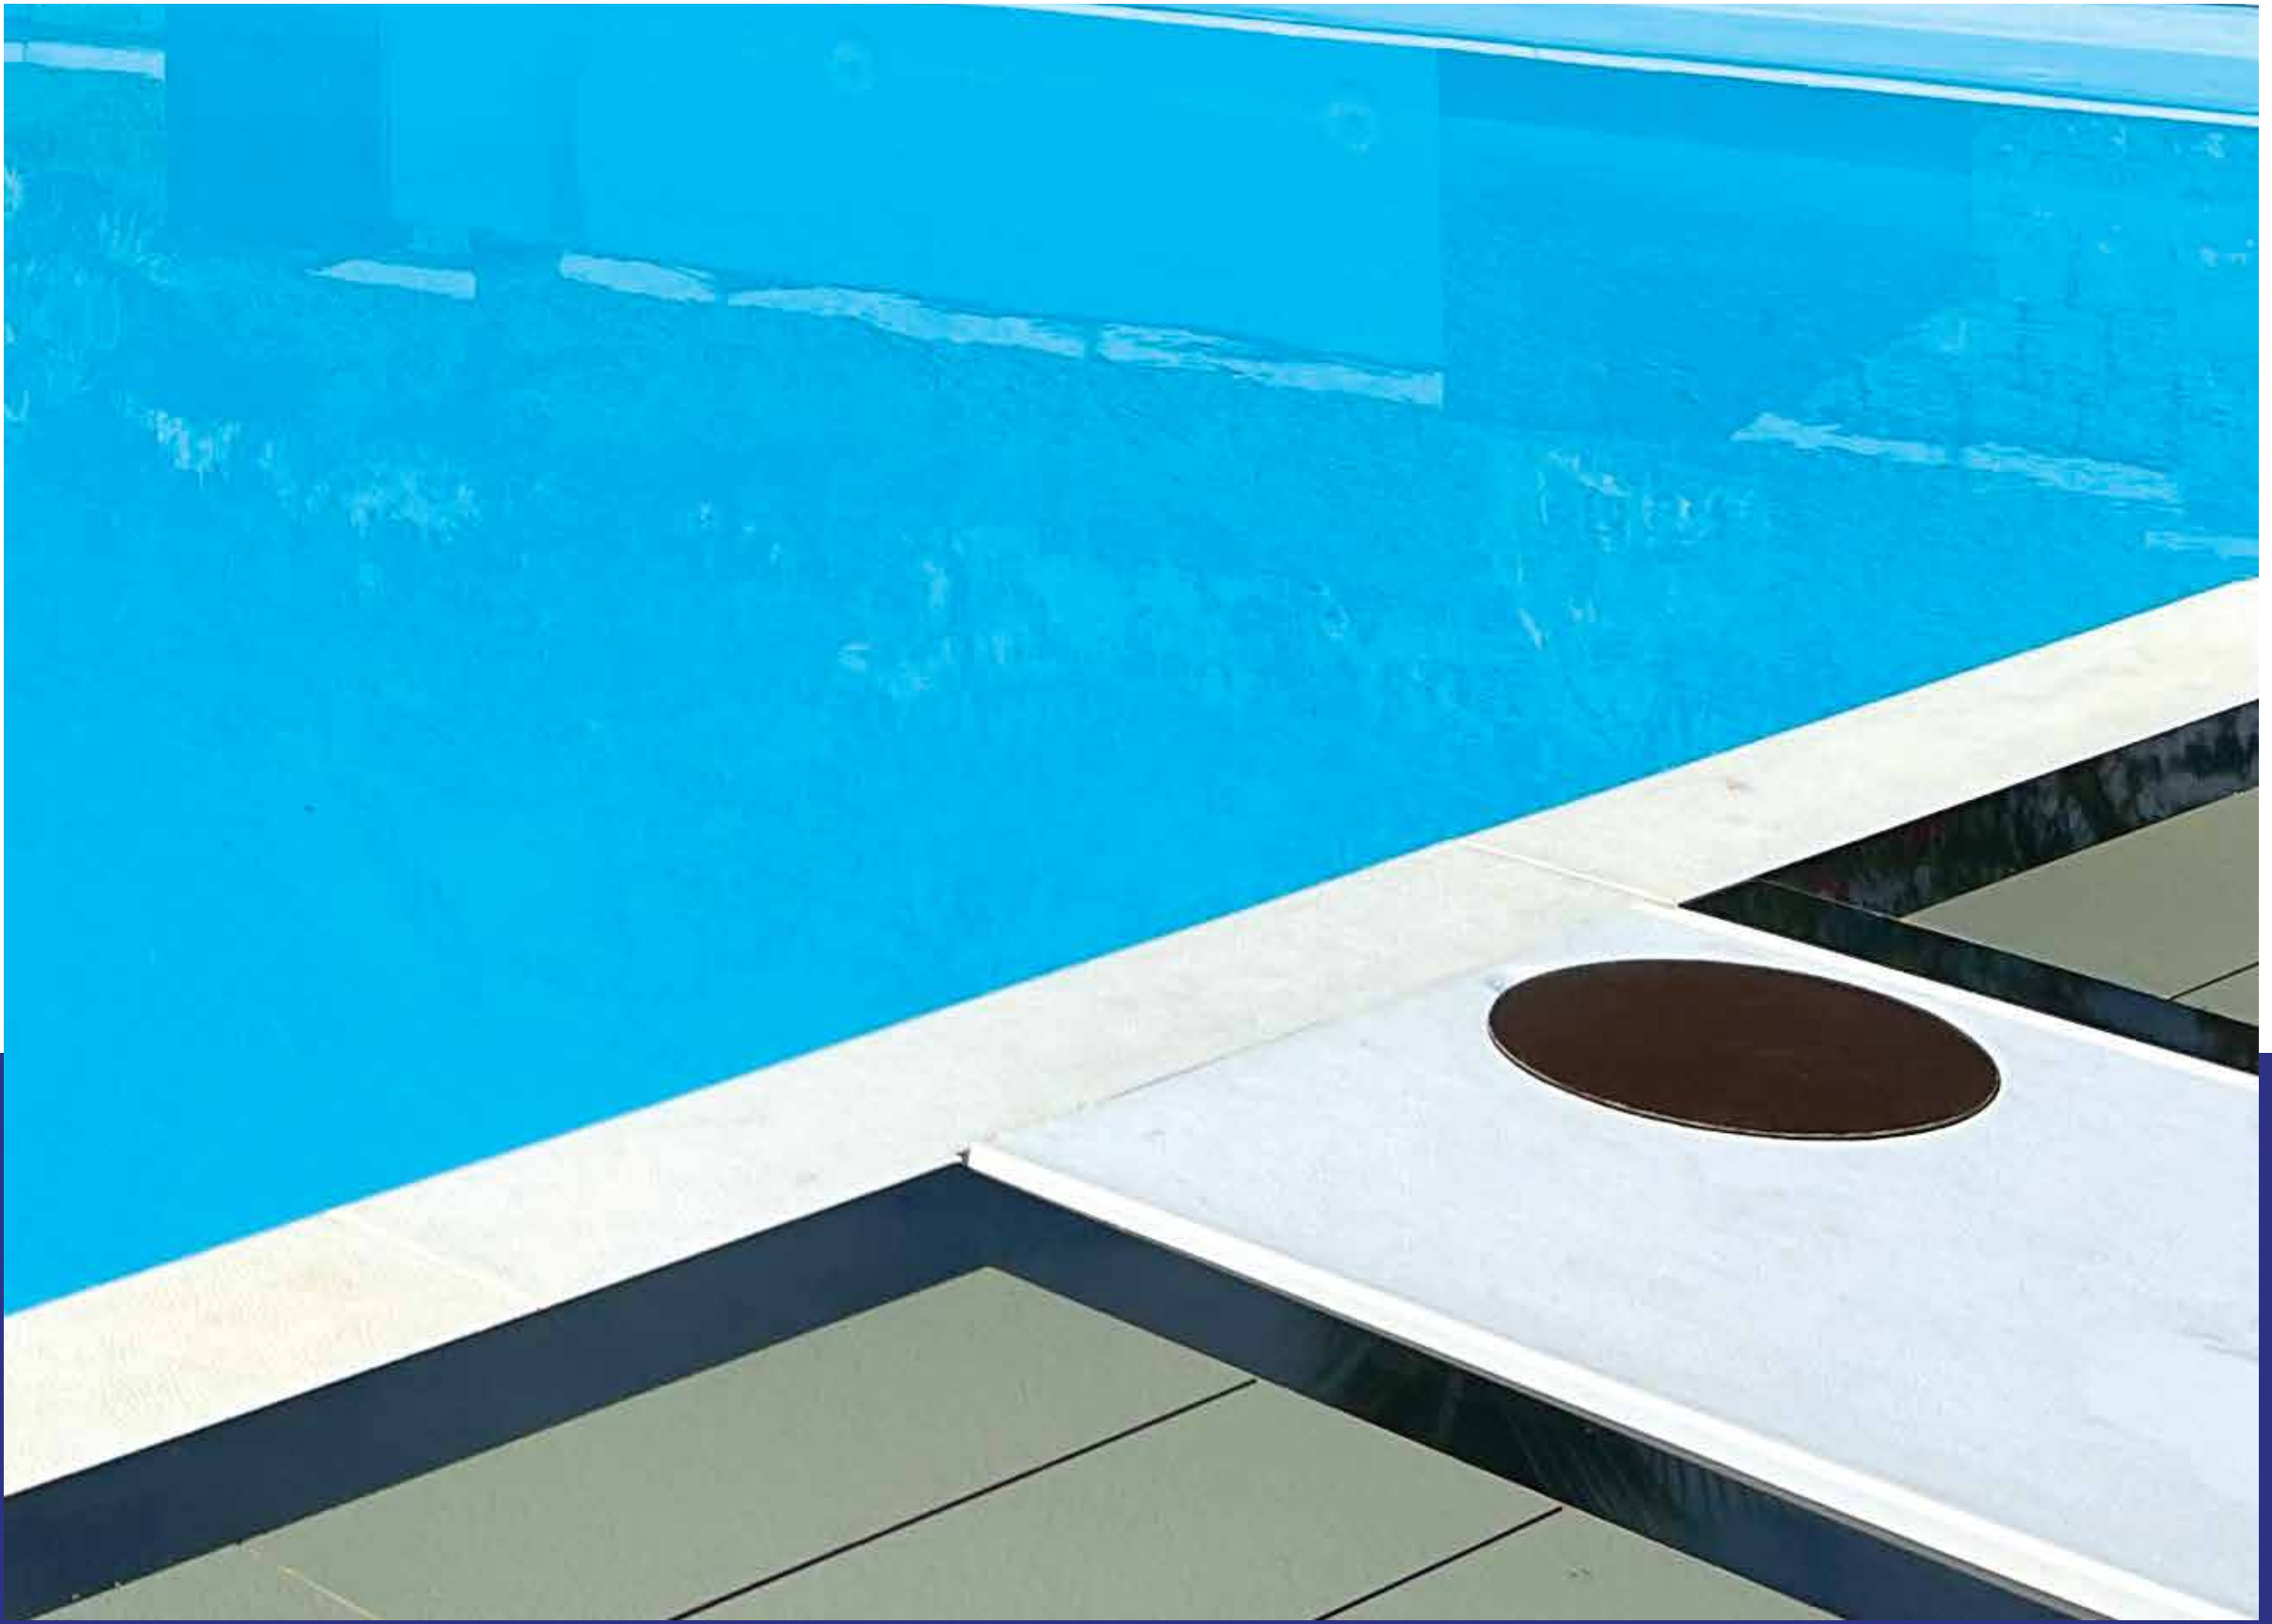

BR SERIES FILTERS

BR201 and BR 302 filters are designed for concrete and tile pools. Monocoque FRP body separating the pump room and filter chamber is designed to be fitted on the periphery of the pool and integrated on the deck space. This filter is a complete replacement of traditional sand filters occupying the messy pump rooms. Available in single and dual filter chambers this single filter is sufficient for a pool of upto 75 M2.

FAC SERIES

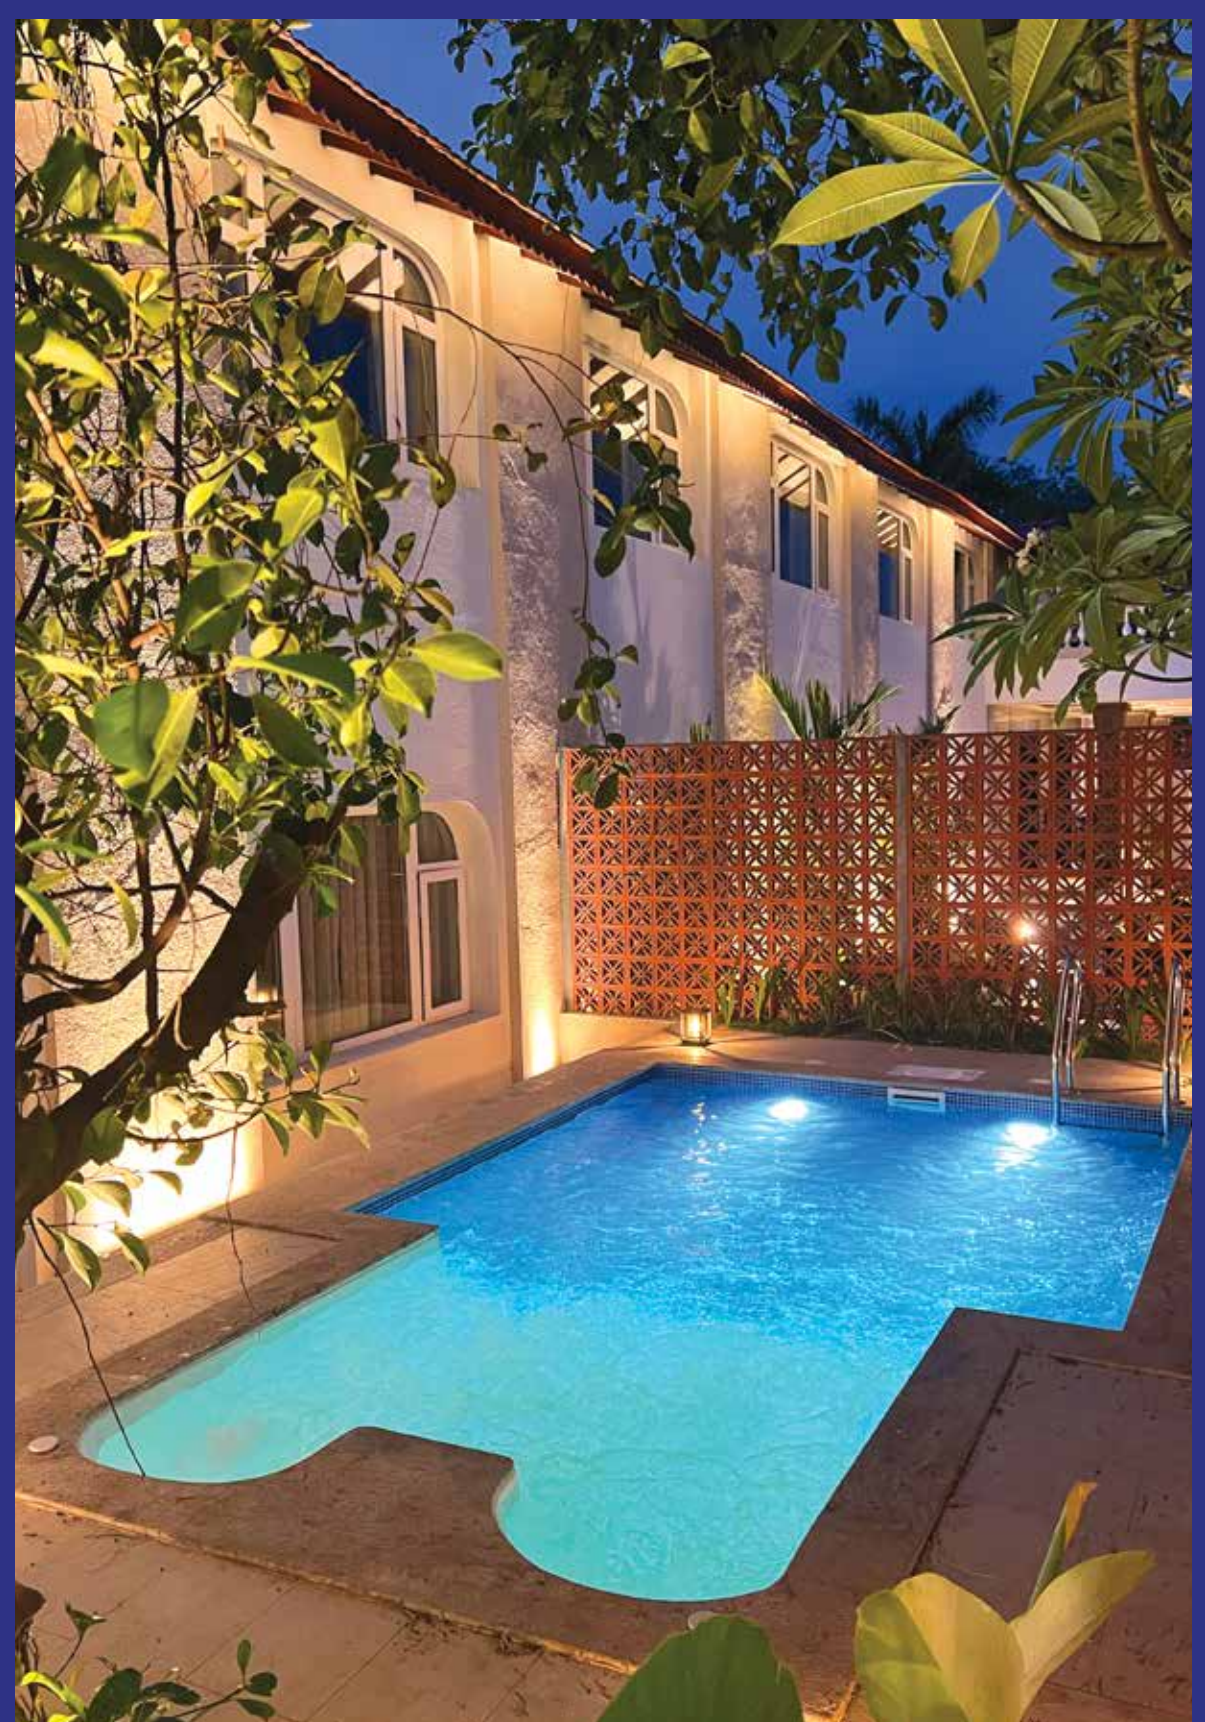

FAC 201 and FAC 302 filters are designed for Liner pools and Hybrid structure. Flushed on the deck and inside the pool FAC filters seamlessly integrate with the pool and the deck. Just like any modern filter system this filter is also a complete replacement of traditional sand filters and the messy pump rooms. Available in single and dual filter chambers this 1 unit is sufficient for a pool of upto 75 M2.

VICTORIAN STEP FILTER AND HILUX JACUZZI FILTER

These are high end filter units catering to the needs of the creamy layer. Loaded with multiple features, the permutations and combinations of luxury is redefined. Experience the Ergonomic pair of seats fully and partially reclined creating memorable moments to cherish.

IN-SITU PERMANENT ACTIVE FRP STRUCTURE PANELS.

VARIOUS MODELS OF READY TO INSTALL FIBER GLASS POOLS
